

# Assembly Instructions

1. Loop some strong thread through the hole (use something to help pull the thread). Check the loop is on the correct side.

2. Using this thread, firmly pull the band through the hole to create a loop.

3. Ensure you have enough space to insert the pin through the rubber loop later.

4. Also ensure you have enough band extruding on the other side. This can be trimmed down later.

5. Insert the pin through the loop as shown here.

6. Firmly pull the band back to lock the pin and band in place.

7. You may want to trim the excess band for a neat finish. Do not trim too close to the slingshot.

8. Repeat steps 2 to 8 for the other side.

## Fast, Light & Deadly Accurate

Pro Shot Bands are exceptionally efficient slingshot bands for maximum accuracy, offering high velocity despite light draw weights.

## Lasts Longer than ever before

Pro Shot Bands are precision die-cut from Thera-band™ Gold exercise bands. Their unique shape enhances the number of shots they can deliver.

Pro Shot (UK) is the new name for **Milbro Proshot**.  
**Still the original, still the best**
